

Below are NAP Consistency's which should be corrected.

What is 'NAP Consistency'?

NAP is an acronym for, 'Name, Address, Phone'. NAP Consistency means your business's Name, Address, and Phone Number are consistently listed the same across the web.

Why is NAP Consistency Good for SEO?

Search Engines are all about confidence... or is the search engine confident that a business and/or website going to be able to fulfill the needs of the person searching for a specific product or service. In order to build confidence with search engines businesses must ensure a search engine understands exactly who and where they are. Building on that Search Engines are computers... and computers are ridiculously detailed oriented. So when search engines are crawling the web they can – and will – notice even the slightest variations in a business name, address, phone number, and/or website address. These variations can hinder a search engine's confidence.
